☑ How to Import NorthWind   Delete

0% |▏

☐ 1) Download the .bak file here: http://blog.regencysoftware.com/post/2014/11/16/download-sql-server-northwind-database-bak-file

☐ Place the .bak file in your C drive (so it's easy to find for SSMS)

☐ 2) In SSMS right click on your Databases folder

☐ 3) Select Restore Database...

☐ 4) Select back-up from Device

☐ 5) Next to device click on the box with three periods [...]

☐ 6) In the new pop up click add

☐ 7) Navigate to where your .bak file is stored

☐ 8) Hit okay on each window. Does it work? If yes you're done! If no, debug and try again. Does your database already exist?
